

CONFIDENTIAL: Q3 2026 Strategic Financial Review

Company: Nexus Global Technologies

Date: September 16, 2026

1. Executive Summary

Q3 2026 yielded record-breaking growth, with global enterprise revenue reaching \$14.2 million, surpassing our internal projections by 12%. This surge was driven primarily by our transition to automated hybrid-cloud infrastructure and the rollout of our new data analytics suite.

2. Financial Highlights

- Gross Revenue: \$14.2M (Up 18% Year-over-Year)
- EBITDA: \$3.1M
- Operating Expenses: Increased to \$4.5M. This 22% spike was primarily due to aggressive R&D scaling in our predictive analytics division and unexpected API token costs.
- Customer Retention: Remained highly stable at 94.2%.

3. Risk Factors & Mitigation

The primary risk identified this quarter is the scaling cost of cloud database storage. To mitigate this, the engineering division is deploying a dynamic data routing system. This architecture is expected to reduce server load and reduce API costs by 30% going into Q4.

4. Q4 Forward Outlook

Leadership projects Q4 revenue to stabilize around \$15.5 million. The core objective for the upcoming quarter is migrating our legacy SQL database structures to flexible JSONB storage to support broader, unstructured data ingestion for our enterprise clients.
